Bogdan Shchavinskyi

Tech Lead / Senior Software Engineer — Backend Infrastructure, DevOps & Platform Engineering

Based in Ukraine, Traveling Latin America, currently in Brazil | Open to remote / B2B / contractor roles / relocation

Email: bshchavinskyi@gmail.com | LinkedIn: linkedin.com/in/b-shchavinskyi-fullstack/

Github: https://github.com/master-bogdan | Website: https://master-bogdan.github.io/personal-website/

PROFESSIONAL SUMMARY

Hands-on Tech Lead / Senior Software Engineer with 8+ years of experience building backend systems and running cloud infrastructure. Focused on architecture, performance, scalability, and production reliability. Experienced in leading technical decisions and introducing agentic AI workflows that improve development, code reviews, testing, and onboarding.

CORE SKILLS

Backend Engineering: TypeScript, Node.js, Go, Nest.js, Express.js, REST APIs, event-driven systems, RabbitMQ/AMQP
Cloud & Platform Engineering: AWS, Kubernetes, Docker, Linux, GitHub Actions, CI/CD
Databases: PostgreSQL, MongoDB, Redis, DynamoDB
Observability & Reliability: Prometheus, Grafana, OpenSearch/ELK, Fluent Bit, CloudWatch
Agentic AI Development: AI coding agents, MCP integrations, AI repository instructions, reusable agent skills, AI-assisted code review
Additional Technologies: React.js, React Native

PROFESSIONAL EXPERIENCE

Tech Lead / Senior Software Engineer

ibusinessfunding.com — Florida, USA / Remote | Apr 2024 – Present

Working on fintech applications across backend systems, cloud infrastructure, and production reliability.

- Took over an in-house eSignature application from an outsourced team and later became its Tech Lead. The application replaced DocuSign, saving approximately $200K per year.
- Rewrote the eSignature application's PDF-generation AWS Lambda from Node.js to Go, reducing processing time from around 2 minutes to 20 seconds and generated file size by up to 80%.
- Refactored a largely AI-generated spreadsheet application with serious performance and scalability problems. Eliminated UI freezes, reduced backend memory usage from around 8 GB to 700 MB, and enabled processing of larger files.
- Redesigned spreadsheet calculations by moving heavy processing to the backend, reducing save time to under 1 second for spreadsheets with around 1 million rows.
- Improved Kubernetes deployments and reliability through simpler manifests, GitHub Actions workflows, graceful shutdown, and readiness handling. Reduced deployment time by approximately 33% and enabled releases without interrupting active users.
- Added structured logs, trace IDs, and production error alerts, reducing investigation time from hours to minutes.
- Introduced agentic AI development workflows using repository instructions, reusable skills, MCP integrations, automated code reviews, and testing. Shared practices with the team to speed up development and simplify onboarding.
- Led technical decisions across two engineering teams of 4 and 3 engineers, including architecture, code reviews, and solving complex engineering problems while staying hands-on.

Senior Software Engineer — Backend Infrastructure & Platform Engineering

ALEPH ONE / Swag.com — New York, USA / Remote | Apr 2022 – Apr 2024

Contract work for Swag.com through ALEPH ONE, focused on backend infrastructure, integrations, API systems, reliability, and performance improvements.

- Contributed to the design and launch of a public REST API using Node.js and NestJS, increasing order volume through the API channel by 20%.
- Built integrations with Shopify, Zapier, UPS, FedEx, and other external APIs to automate fulfillment workflows.
- Optimized critical MongoDB queries and backend endpoints, reducing response times by 68–70%.
- Extracted email delivery into a dedicated RabbitMQ/AMQP microservice, reducing memory usage in the main application by 26%.
- Designed a lightweight CQRS-style pattern using PostgreSQL and Redis caching to keep order reads fast during traffic spikes.
- Developed a custom Shopify application that contributed to an 8% revenue increase over one year.
- Helped interview and onboard 11 JavaScript developers.

Team Lead / Senior Software Engineer — Full Stack & Backend

lineup.ua — Ukraine / Remote | Apr 2021 – Apr 2022

International software development company working across 4 countries. Promoted from Frontend Engineer to Team Lead / Senior Software Engineer within 6 months.

- Led a team of 5 engineers across technical delivery, architecture decisions, planning, and code reviews.
- Architected and delivered a React.js and React Native e-commerce application from scratch within 4 months.
- Led development of a marketplace platform using Node.js, NestJS, React, Next.js, and PostgreSQL, delivering the project within 6 months.
- Set up GitHub Actions CI/CD and Kubernetes deployments on on-premises infrastructure. Also built a feature flag system supporting safer rollouts and canary releases.

Full Stack Developer

Viparts sp. z o.o. — Poland / Ukraine / Remote | Aug 2018 – Apr 2021

Automobile tuning parts shop and warehouse.

- Developed and deployed e-commerce applications using React, Node.js, and Firebase.
- Built an internal ticketing system to improve customer communication and support workflows.
- Managed Linux web servers, deployments, troubleshooting, and performance optimization.

ADDITIONAL EXPERIENCE

Scuba Diving Instructor

PADI / SDI — Egypt | Nov 2018 – Apr 2021

Trained 100+ divers from different countries and completed 1,500+ dives.

EDUCATION

Master of Science: Land Management and Cadastral Engineering — National Aviation University, Kyiv, Ukraine, 2011

Bachelor of Science: Land Management and Cadastral Engineering — National Aviation University, Kyiv, Ukraine, 2010

CERTIFICATIONS

Certified Kubernetes Administrator (CKA): CNCF / The Linux Foundation

Certified Kubernetes Application Developer (CKAD): CNCF / The Linux Foundation

LANGUAGES

Ukrainian: Native

English: B2 / C1
